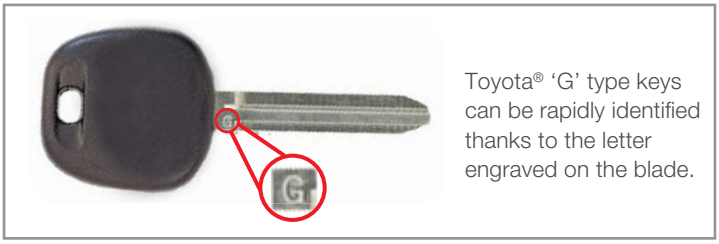
FREE Software Update
Lost Key Situation Via OBD - Toyota® 'G' Key Only
ADS174 - Code D745332AD

June 2017



Toyota® 'G' type keys can be rapidly identified thanks to the letter engraved on the blade.

Advanced Diagnostics is pleased to announce the release of a free update for Toyota® ADS174 key programming software for various Toyota® vehicles worldwide.

What does the software do?

ADS174 software resets the immobiliser in a lost key situation, so a Toyota® 'G' type key can be programmed into the vehicle. Previously, the immobilizer needed to be removed from the vehicle to perform the reset, this is no longer required. The new software update now allows keys to be programmed from a lost key situation via the OBD port.

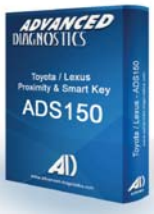
Remote fobs are programmed with a manual procedure. Existing keys will be deleted, but can be reprogrammed back into the vehicle if they are found at a later date. Aftermarket 'G' keys and transponder chips can also be used. One way to identify a 'G' type key is to look on the blade of an OEM key, a 'G' will be stamped on the blade.

Please see application list below for vehicle coverage or Info Quest.

What other software and products will I need?

MVP PRO / AD100 PRO

ADS150 SOFTWARE



Contact your distributor to purchase ADS174 software now.

OFFER DETAILS	
Cable	ADC250 or ADC251
Dongle	A or Smart Dongle
Software category	A
Other software required	ADS150
Smart card	Yes or Smart Dongle
